

230 Head Van De Stroet Bred Heifers

Selling January 18, 2019

Sioux Falls Regional Livestock

Mostly black Angus with some black baldy heifers bred to Bruns Angus and Peterson Angus bulls selected for easy-calving, light-birthweight, and excellent growth potential. Bulls were put in June 1 for 60 days. All heifers were ultrasounded by Valley Vet Clinic on August 30 & August 31, 2018 and will be sorted into 20 day calving periods.

Left Ear Tag "1" - Calving March 10 – March 31

Left Ear Tag "2" - Calving April 1 – April 20

Left Ear Tag "3" - Calving April 21 – May 10

A full pre-breeding vaccination program was used including a Calfhood Vaccine, PregGuard FP 10 with a booster, Pinkeye Vaccine and Vision 7 Somnus.

November 21 & 23, 2018, they were poured with Promectin B and given the first Scour Bos 9 vaccine. Boostered with the 2nd Scour Bos vaccine just prior to sale.

Heifers have been on a Kent Feed protein and mineral program.
